

WILAPLAT Finishing Baths

Paris Oxide Colouring Bath

Article No. 4040110102

Description

The Paris Oxide Colouring Bath imparts a black tone to silver and copper and their corresponding alloys. It forms a durable, anthracite-coloured tone which can be varied by subsequent brushing or polishing. The Paris Oxide Bath contains small amounts of palladium.

Application

The pieces to be treated are first electrolytically degreased, so that during the colouring process there is no stain formation due to inadequate moistening. The colouring itself is done with the aid of a hairbrush or by repeatedly immersing the work pieces in the undiluted solution. Upon completion of the process, leave the pieces to air (do not rinse!). After this the colour can be toned down with a mild polishing agent on the buffer wheel or with moistened pumice powder on a brush.

The Paris Oxide Bath contains highly inflammable solvent and must not be warmed up.

Operating Data

Temperature

18-25 °C

Storage

Closed, cool and away from light

Tank Material

Glass, porcelain, plastic (PA, PE, PFE ABS)

Supply Form

Ready for use from 20ml

Regeneration

Not possible

Warning

Chemicals and materials used in electro-plating can be corrosive or poisonous. During use, storage, transportation and disposal the relevant guidelines must be observed.
